### benefits

---

**OPEN API ENABLES ENTERPRISE INTEGRATION:** Given our deep experience with enterprise software systems, we can ensure feature requirements such as Single Sign-On (SSO), a Content Management System, or third party systems integration is available upon implementation. We are the only platform we know of that can integrate application functions within a reader environment.

**PLATFORM CAN EMBED FULL APP FUNCTIONALITY WITHIN THE PLATFORM:** A key technical benefit to ArcFrame is that unique feature requests can be developed without the static upgrade path traditional independent software vendors require. Because we offer a toolset, you can be assured that custom features and functions to differentiate the experience can be developed immediately and fully functional embedded applications can live within the reader or standalone in the App Store environment.

**HTML5:** We also offer HTML5 and Open GL development, providing a rich set of functionalities, seamless to the client side producers. We welcome a technical deep dive 'under the hood' as part of your decision making process.

**HOST FLEXIBILITY:** The reader can be self hosted or enable content to be served by multiple third party host providers. The toolset offers the control and flexibility for whatever is right for the client or channel partner.
